Introduction	4
Abuse and Neglect	6
Stages in Assessment, Analysis and Planning Intervention	8
1: Identification of harm and initial safeguarding	9
2: Gather assessment information	9
3: Establish the nature and level of impairment of the child's health and development	10
Organise the information gathered	11
Child's developmental needs domain	12
Parenting capacity domain	14
Family and environmental factors domain	16
Unborn children	19
4: Analyse the patterns of harm and protection	22
Consider the chronology of salient information	22
Factors and process	23
Focus on the child's health and development	24
Impact: assess the degree of severity of difficulties and the magnitude of strengths	24
Unborn children	27
5: Child protection decision making and care planning: the safeguarding analysis	30
Profile of harm and impairment of the child's health and development	31
Predict the likely outlook for child: the risks of re-abuse or likelihood of future harm (the systemic analysis)	38
Determine the prospects for successful intervention	40
Summary of safeguarding analysis	51
Decision-making	53
6: Develop a plan of intervention	54
The child's developmental timeframe	55
Intervention goals to prevent future harm and impairment	56
7: Identify outcomes and measures for intervention	57
Assess outcomes for children	57
Hypotheses about the impact of interventions	58
Validity, reliability and norms of baseline and follow-up measures	59
Standard and case-specific measures	59
Appendices	
Developmental progression: Indicators of expected changes and growth	63
Summary of key timeframes for child development	73
Interview approaches and schedules for assessing the prospects for successful intervention Supervision ...	78
Report writing	93
Implementation of the SAAF	95
Bibliography	97
